Version 1.1 | 2026-11-06 | Current

Preservation and Export Log

1. Why GitHub

- The repository lives in my own GitHub account, not in my school account, so it does not depend on school logins that will end.
- GitHub keeps a history of every change, so earlier versions can be seen.
- The pages are plain text (Markdown), which can be read in any text program if GitHub ever goes away.

GitHub is one copy, not preservation on its own. Section 3 lists every copy and where it is kept.

2. File formats

Type	Files	Plan
PDF	Finding aids, Accession Record, Deed of Gift, Records Management Policy, Strategic Plan, resume, certificates	Keep as is
Word and PowerPoint	Three lesson plans and Digitization Guide: shared as accessible PDFs (Word originals kept by the author). Patron Relations presentation: PowerPoint kept, with PDF of slides and a narration transcript	Done: PDF copy added beside each original, 2026-11-06
Pictures	Display photos, screenshots	Keep as is
Plain text	READMEs, this log, Build Log, fingerprint list	Keep as is
Unknown	The file named "Omeka"	Keep as is

3. Copies

No single copy counts as preservation. The portfolio is kept in four separate places, so the loss of anyone does not lose the portfolio.

Where	What is there	Last updated
GitHub	Everything	2026-11-06
My computer	Full copy	2026-11-06

External drive	Full copy	2026-11-06
Cloud storage	Full copy	2026-11-06

4. Export test

I tested whether the whole portfolio can be taken out of GitHub and still work.

Step	Done?	Result
Download the whole repository as a ZIP file	Yes	Download took quite some time but was successful
Unzip it on my computer	Yes	Individual sections opened
Open the main README without internet and follow three links	Yes	Files opened.
Open one finding aid, one lesson plan, and one picture	Yes	Worked
Run the fingerprint check; every line should say OK	Yes	All OK

Date of test: 2026-11-06

5. What would still be lost if the portfolio moved

- The digitized audiocassette recordings exist only on the Savannah Municipal Archives' servers and hard drives, and the digitized 19th-century maps exist in its PastPerfect system.
- Live links to PastPerfect, Omeka, and StoryRoots would stop working if those sites changed.
- GitHub's History view of older versions would not travel with a ZIP download.

6. Fingerprint check history

Date	Result	Notes
2026-10-12	All OK	First list created
2026-10-14	All OK	Lesson plans added
2026-10-24	All OK	List rebuilt to cover every file
